Filter Life Cycle

- Alkaline Filter can be used for about 3000 liters.

How to Use

- Fill up bottle with clean water and shake vigorously for 2-3 minutes and dispose it. This removes excess loose material.
- Fill the bottle with fresh water. Shake vigorously for 30 seconds and wait for 20-30 minutes before drinking. Water becomes healthy alkaline water.

IF IT TASTES TOO STRONG, DILUTE IT A BIT WITH ADDITIONAL SOURCE WATER.

Best to drink freshly made alkalized water and drink often.

Give New Life to Your Alkaline Filter (Recharge/Clean)

- To get an optimum result of filter recharge once in a week on routine bases.

Recharge Procedure

- To recharge bottle, fill purified water until the filter becomes fully submerged and add 25gm citric acid crystals to make solution.
- Now, shake it 3-4 times and keep it ideal for 15 minutes. Then dispose the same water.
- Fill clean water until the cartridge gets submerged and shake the bottle again for final cleaning. Dispose than water.
- Now, filter is recharged/cleaned and ready to produce optimum result.

Note

- before using cartridge after recharge, keep cartridge to remain dry for 5-6 hrs and then take under usage.

Instruction

- Only use purified water for better life span of h2aaa filter.
- Minimize expose of the filter to direct sunlight or to extreme heat for long period of time.
- Pour the water in bottle at the time of drinking.

Cleaning Instructions

Hand washes the bottle, lid, and filter reservoir with a mild detergent and water. Do not use abrasive cleaner. Rines well.

Do not wash in the Dishwasher.

Packing Unit Contents

- Bottle: 1 Nos
- pH Testing Kit: 1 Nos
- User Manual: 1 Nos
- Alkaline Cartridge: 1 Nos (if you need extra cartridge : [Click Here](#))
